

Product Update Bulletin

Date: 19th August 2010

Description: SS41HF Snorkel Update

Application: NS/NT 2007 On Mitsubishi Pajero/Montero manual & automatic transmission with 3.2 litre diesel engines fitted

Availability: In Stock

Until now the VNT turbocharger installed in automatic NS and NT Pajeros created an acoustic issue resulting in Safari recommending the SS40HF snorkel only being fitted to manual vehicles.

Safari has undertaken an extensive research program and redesigned the NS/NT Pajero/Montero diesel snorkel. The new SS41HF snorkel provides maximum airflow performance while maintaining acceptable induction sound levels on both manual and automatic diesel vehicles.

The fact the SS41HF maintains airflow is a significant point. Competing products have addressed induction sound by restricting airflow.

Despite undertaking an extensive development and retooling program, the cost of the SS41HF snorkel has not changed from its predecessor.

This is an opportunity to catch up with Mitsubishi Pajero/Montero customers you were unable to assist in the past, and fantastic news for future Mitsubishi Pajero/Montero customers.

SS41HF snorkels are available now.
