There's no easier or more economical way.

Modern, direct-injection diesel engines are so efficient they often no longer generate enough heat to warm the vehicle's interior.

As a result, nearly all diesel vehicles are factory-fitted with an "auxiliary heater" as standard in order to ensure a cosy temperature inside the vehicle.

Comfort in a car does not have to be expensive.

All modern diesel vehicles such as **Range Rover Sport** and **Land Rover Discovery 3** fitted with a fuel-powered auxiliary heater, can have the heater upgraded to operate as an engine pre-heater— at a very reasonable cost.

For a cleaner environment.

Emissions from a pre-warmed engine are significantly reduced— by as much as 50% for a petrol engine car.

- It's so easy to significantly reduce pollutant emissions
- A comfortable climate in your car lets you concentrate 100% on the road

Switch on your engine to feel the benefit.

As soon as you turn your ignition on and operate the heater blowers you will notice the warmer temperature immediately.

No more waiting for the engine to warm up—thanks to the Webasto engine pre heater which has already warmed it up for you!

Programmed for warmth: convenient pre-set timer

Perfect timing with three start times that can be programmed up to 24 hours in advance.

Your engine can be heated ready for the start of your journey. After all you don't come home and then turn your heating on.

And as a Range Rover Sport or Land Rover Discovery 3 owner you have an unbeatable advantage: turning the auxiliary heater on your vehicle into an engine pre-heater is particularly cost effective.

Key Advantages:

- Easy installation
- Inexpensive installation cost
- Many of the benefits of the Webasto brand parking heaters
- Accessible operation: Timer mounted in interior light console
- A warm engine is more responsive
- No more cold starts = less wear and tear on your engine
